Subject: Dimock needs help

Michael,  
we need help with getting to the bottom of this water-contamination issue in Dimock, Pa.  
this Tues. , the 29th,  
several affected families are being tested by Cabot's company, AMEC,  
to see what the methane levels are in their wells.  
we need others there like the EPA, since the DEP is not doing any further testing at this time, that I know about,  
to test also and see what your results are  
and to test for methane and other contaminants that have been found in their water the past two to three years.  
Can you please arrange this -- testing of the water--  
and see what is there at this time before Cabot is allowed to stop delivery of water to these families?  
We can help you contact the families and meet you there, also and witness this.  
thanks, for your help with this, DEP had dropped us and wont do any further testing on us and has said they have spent enough money on us and they are done with us!

Please come to Dimock and meet with Us affected family's

Julie and Craig Sautner
